

## Listing of Claims

Claims 1-4 (canceled)

Claim 5 (currently amended): An article comprising a substrate having an imaging composition on a first side of the substrate, the imaging composition comprises one or more quinone compounds, one or more acyl esters of triethanolamine having a formula:  $N(CH_2CH_2OC(O)-R)_3$  where R is alkyl of 1 to 4 carbon atoms, and one or more cyclopentanone based conjugated photosensitizers in sufficient amounts to affect a color or shade change upon application of energy at powers of 5mW or less, and a second side of the substrate comprises an adhesive.

Claim 6 (canceled)

Claim 7 (original): The article of claim 5, further comprising a protective polymer layer adjacent the imaging composition.

Claims 8-10 (canceled).

Claim 11 (previously presented): The article of claim 5, wherein the composition further comprises one or more color formers.

Claim 12 (previously presented): The article of claim 11, wherein the one or more color formers are leuco-type dyes.

Claim 13 (currently amended): A method comprising:

- a) providing an article comprising a substrate having an imaging composition on a first side of the article, the imaging composition comprises one or more sensitizers quinone compounds, one or more acyl esters of triethanolamine having a formula:  $N(CH_2CH_2OC(O)-R)_3$  where R is alkyl of 1 to 4 carbon atoms, and one or more cyclopentanone based conjugated photosensitizers in sufficient amounts to affect a color or shade change upon application of energy at powers of 5mW or less, and a second side of the substrate comprises an adhesive;
- b) applying the article to a work piece; and
- c) applying energy at powers of 5mW or less to affect the color or shade change.

Claim 14 (canceled)

Claim 15 (previously presented): The method of claim 13, wherein the energy is selectively applied to the imaging composition to affect an imaged pattern.

Claims 16-18 (canceled)
